

## Speedy Board

**SO EASY TO USE!**

*The Bluff "Speedy Board" allows the forklift driver to move, set in place and retrieve the dock board without leaving the seat of the forklift.*

Available in our "T" line of steel dock board, this simple notch pattern on the leading edge of the board allows the driver to scoop the board and move it to or from the dock without the need to get off the equipment, as boards with lifting loops or chains require.

A driver is most at risk when outside the relative safety of the protective cage of the forklift. The "Speedy Board" eliminates the need to exit the cage, thereby increasing safety and productivity, and also saving time.

The good news is that "Speedy Boards," like all Bluff Manufacturing boards and plates, are ANSI compliant. They are the only ANSI portable boards and plates on the market. Your employees deserve the best and it does not cost more.

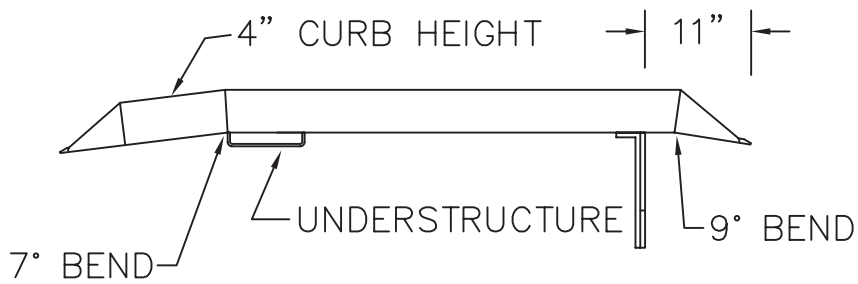

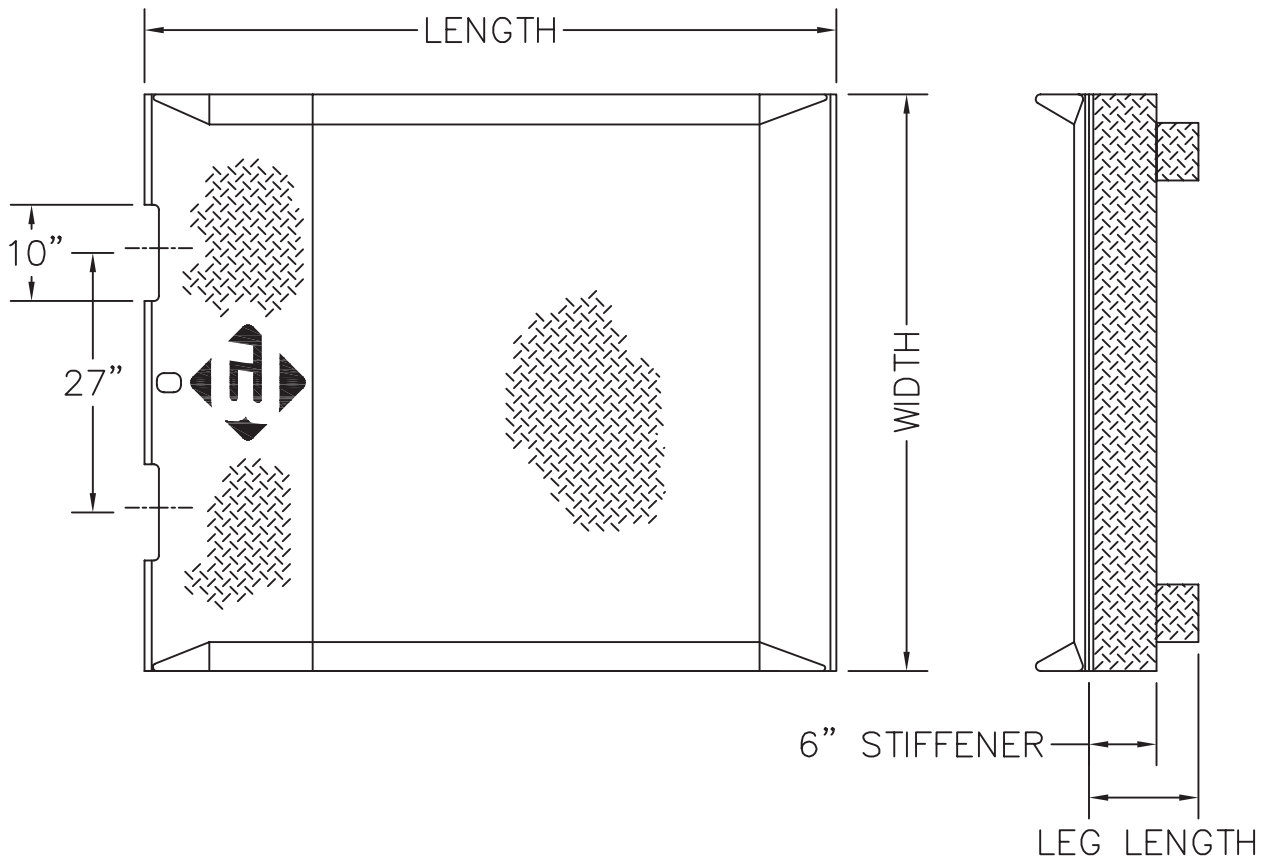

- **RUGGED**
- **EFFICIENT**
- **SAFE**
- **ECONOMICAL**

Manufactured and tested in compliance with  
ANSI Standard MH30.2
