

Conveyor Crossovers

Bluff's goal is to provide you with conveyor crossover solutions that maximize the efficiency of operations and minimize the possibility of potential injuries by keeping personnel safe.

FEATURES AND BENEFITS

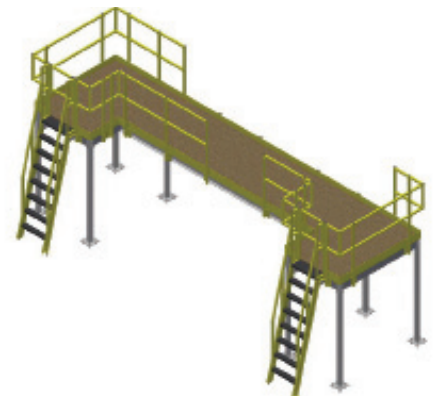

- Welded steel construction for longer life cycle and lower maintenance costs.
- Indoor and outdoor usage with serrated grip strut for slip resistance. Galvanizing is also available for outdoor applications.
- Modular components allow for countless customized configuration possibilities.
- Alternates include the Z-shaped, L-shaped and U-shaped configurations with intermediate landings where necessary.
- Ladders, ship ladders, OSHA stairs, and IBC stairs can be substituted or added between platforms depending on code requirements, available space and customer needs.
- Crossover systems can be custom designed to your specific application. Modular crossover systems are also available with a maximum clearance of 8 ft., spans of 10 ft. in 2 ft. increments, and standard widths of 24 in., 30 in. and 36 in.
